About This Game

Newt Isaacson sets out on another adventure exploring many of our solar system's moons, collecting samples, and experiencing the unique environments each holds.

Newt's Voyage is a newtonian physics based 2D flying game where you're tasked with landing on tricky safe zones while avoiding touching the moon surface, or slamming into any obstacles. You'll need to control your momentum carefully while conserving enough fuel to finish the mission with a good score.

Explore the popular moons of Phobos, Titan, Enceladus, Europa, IO, and of course Earth's Moon, experiencing their unique gravity and environment.
